

# TCP461 8 Channel Serial Interface RS232/RS422

### Application Information

The TCP461 is a standard 3U 32 bit CompactPCI module and offers 8 channels of high performance asynchronous serial interface.

Three different standard modules are available: The TCP461-10x provides 8 RS232 interfaces. The TCP461-11x provides 8 RS422 interfaces. The TCP461-12x provides 4 RS232 and 4 RS422 interfaces.

Other configurations are available as factory build option on a per channel base.

All modules offer front panel I/O with a HD50 SCSI-2 type connector. The TCP461-2x modules offer additional J2 rear I/O. Each RS232 channel supports Rx/D, Tx/D, RTS, CTS and GND. Each RS422 channel supports Rx/D+/-, Tx/D+/- and GND. Two channels of the TCP461-x0x/-x2x offer full modem support (Tx/D, Rx/D, CTS, RTS, DSR, DTR, CD, RI and GND) for RS232. Two channels of the TCP461-x1x support Rx/D+/-, Tx/D+/-, RTS+/-, CTS+/- and GND for RS422.

Each channel has 64 byte transmit and receive FIFOs to significantly reduce the overhead required to provide data to and get data from the transmitters and receivers. The FIFO trigger levels are programmable and the baud rate is individually programmable up to 921.6 kbps for RS232 channels and 5.5296 Mbps for RS422 channels. The UART offers readable FIFO levels.

All channels generate interrupts on CompactPCI interrupt INTA. For fast interrupt source detection the UART provides a special Global Interrupt Source Register.

All serial channels use ESD protected transceivers up to ±15KV.

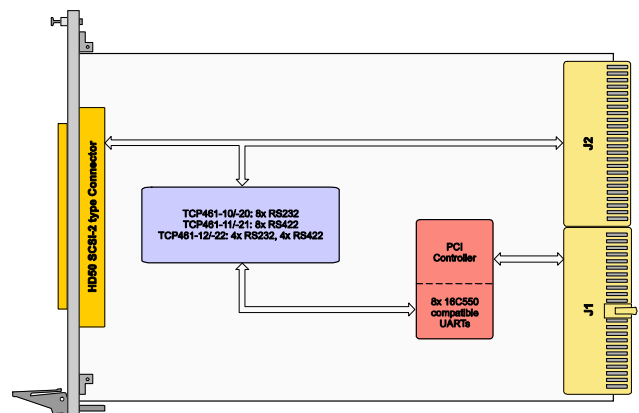

The TCP461 can operate with 3.3V and 5.0V PCI I/O signaling voltage.

For First-Time-Buyers the Engineering Documentation TCP461-ED is recommended. The Engineering Documentation includes TCP461-DOC, schematics and data sheets of TCP461.

Software Support (TDRV002-SW-xx) for different operating systems is available.
